

Team 3

Weather or Not

11/11/21

11:00 AM

Online

Team Members

- Zachary Menter [self, facilitator]
- Chris Lofgren
- Elaine Franta
- Nick Pronschinske

Previous Weeks Goals

- Fully implement Necessary API calls
- Implement necessary tests for main activities
- Start on implementations of main activities

Meeting Notes

- We're struggling with writing tests for the UI/activities. We don't really know what to test for or how to do it.
- We don't need to test the layouts, just the back end, right?
- Trying to figure out how to get the API calls working. Chris has been working on that and running into issues with the tests and mocking. Chris and I will meet on Friday afternoon to try to work out these issues so we can continue with the rest of the project.
- Talked about starting on a database for the activity suggestion part of the app
 - Talked about database design so that we can start implementing that
 - We're going to use SQLite for the database
 - Have a table for activities that has the name of the activity, the temperature range for that activity, and the conditions that one could do that activity in (e.g. sunny, cloudy, rainy, etc.)

Goals for Next Week

- Start database design and implementation
- Continue working on tests for activities
- Get API calls working
- Start implementing the current weather, hourly weather, and weekly weather activities using the API
